New Nebula by M. W. Harrington, Director of the Observatory Ann Arbor, Mich.

I wish to put on record a nebula which I found Aug. 18th of this year and which I believe to be new. Its position is RA. 21°7′34″ Decl. N. 8°25′. It is 67′ preceding and 12′ north of Argelander 8°46′32″. It is so faint that I can only see it after resting my eyes in the dark a few moments. It is about 3′ long by half that in breadth and is extended nearly north and south the northern end preceding a little.

Ann Arbor 1882 Oct. 31.

M. W. Harrington.

Ephemeride des grossen September-Cometen 1882. (Fortsetzung von A. N. 2470.)

Von Dr. H. Oppenhein.

Mittleres Aquinoctium 1883.

Berlin 1882 December 16.

Venusdurchgang. Den zahlreichen, durch die Tagesblätter mit grosser Schnelligkeit mitgetheilten, im Allgemeinen günstigen Nachrichten kann ich noch zufügen, dass die deutsche Expedition nach Punta Arenas einen vorzüglichen Erfolg gehabt hat. Es sind 9 Sätze heliometrischer Messungen gelungen, sowie die beiden äusseren und der letzte innere Contact beobachtet worden.

Kr.
